

Workshop2

Q1:

The program allows the user to enter a value for a positive integer 'n' from the keyboard.
Print the first 'n' numbers of the **Fibonacci** sequence to the screen, separated by a space.
Below is an example:

```
8
OUTPUT:
0 1 1 2 3 5 8 13
Press any key to continue . . .
```

Q2:

The program allows the user to enter a positive integer 'n' from the keyboard, 'n' being the number of rows of a right triangle.

Print out the pattern of a right triangle of prime numbers.

Below is an example of how the program will run.

Enter n = 5

```
5
OUTPUT:
2 3 5 7 11
13 17 19 23
29 31 37
41 43
47
Press any key to continue . . .
```
