Whitelist and Blacklist Website

Document Code	05e-TC/TT/HDCV/FSOFT
Version	1.3
Effective date	13-Jan-2026

FPT Software
ManhPT14 2026-07-22 22:00:50

INTRODUCTION

1.1 Purpose

Manage the Internet connectivity from LAN of FPT Software

1.2 Scope

All connections from FSOF LAN to Internet

1.3 Definition

Terminology	Explanation
BlackList	List of destinations is blocked by FSOF policy The blacklist contains websites, IP addresses, domains, and network destinations that are prohibited from access due to security threats, policy violations, or compliance requirements. Access to blacklisted destinations is automatically blocked by network security controls. Attempts to access them may be logged and monitored.
WhiteList	List of destinations is allowed to connect as default. The whitelist contains pre-approved websites, domains, IP addresses, and network destinations that employees can access without additional approval. Users can freely access whitelisted destinations for legitimate work activities. No additional approval is required.
Others (Not Listed)	For destinations not included in either the whitelist or the blacklist, connection is not allowed by default. When access is required for work purposes, an access request must be submitted for review and approval by BUL and ISM before connection is permitted. Note: Since the greylist has been deprecated, all destinations previously categorized as “restricted” are now considered “not listed” and will follow the same approval process as described above.

Whitelist

No	List	Category	Domain	Type	Note
1	Whitelist	Academic	---	Website Category	Refers to academic institutions, research activities, scholarly publications, and higher education systems that produce, share, or store academic data. This includes universities, research centers, online academic portals, thesis repositories, and collaboration systems used for teaching, research, and knowledge dissemination.
2	Whitelist	Accounting/ ERP/ CRM Online Services	---	Website Category	Include cloud-based and on-premise enterprise systems that manage business operations, including accounting, finance, inventory, sales, and customer relationship management (CRM).
3	Whitelist	Business/ Corporate Sites	---	Website Category	Include official websites, portals, and digital platforms of private companies, enterprises, and corporate entities that provide information about their products, services, operations, or investor relations.
4	Whitelist	Business Forums/ Trade Networks	---	Website Category	Include online or offline communities that facilitate business discussions, trade relations, and professional networking, industry forums, trade associations, B2B platforms, chambers of commerce, and online marketplaces.
5	Whitelist	Business Information/ Analytics/ Economic News	---	Website Category	Include platforms, databases, and organizations that collect, analyze, and publish business, financial, and economic data, market research firms, financial analysts, media outlets, and data providers that deliver insights, indicators, or news on global and local markets.
6	Whitelist	Content Delivery Networks (CDN)	---	Website Category	Include distributed network systems that cache and deliver web content, media, or application data to users from geographically closer servers to improve performance and reliability. Ex: Cloudflare, Akamai, Amazon CloudFront, Fastly, Google Cloud CDN, Microsoft Azure CDN.
7	Whitelist	Content Server	---	Website Category	Include servers or systems used to host, store, and deliver digital content such as web pages, documents, images, videos, or software packages. Content servers include web servers (HTTP/ HTTPS), file servers, CDN nodes, and internal repositories used for sharing enterprise information. Apache, Nginx, IIS, SharePoint, Alfresco, internal web portals.
8	Whitelist	Education/ Reference	---	Website Category	Covers educational resources, training materials, online learning platforms, and reference information used for research, self-learning, or professional development.
9	Whitelist	Encyclopedia/ Knowledgebase	---	Website Category	Includes encyclopedias, knowledgebases, wikis, FAQs, and internal documentation systems used by organizations or the public to store and disseminate information. These platforms serve as centralized sources of truth for learning, research, and internal process management.
10	Whitelist	Finance/ Banking/ Insurance	---	Website Category	Include insurance companies, financial institutions, banking systems, and digital platforms that manage money, investments, transactions, and financial data for individuals, corporations, or governments, commercial banks, payment processors, fintech services, investment firms, and insurance companies.
11	Whitelist	Government and Legal Organization	---	Website Category	Include governmental bodies, public institutions, and legal organizations involved in policy-making, regulation, administration, and enforcement of law. This includes ministries, courts, legislative offices, regulatory authorities, and law enforcement agencies.
12	Whitelist	Law/ Legal/ Court Services	---	Website Category	Include governmental and judicial institutions as well as legal services and systems responsible for the creation, interpretation, and enforcement of laws, courts, law enforcement agencies, legal aid offices, bar associations, and digital justice platforms used to manage cases, store legal records, and provide public access to legal information.
13	Whitelist	Libraries/ Archives/ Digital Collections	---	Website Category	Includes digital libraries, institutional archives, image banks, historical records, and multimedia databases that provide access to publications, documents, datasets, or cultural heritage materials. These systems are often managed by academic institutions, governments, or corporations for research, learning, or compliance purposes.
14	Whitelist	Military/ Defense	---	Website Category	Include military, defense, and national security organizations responsible for safeguarding national interests, sovereignty, and public safety. This includes the armed forces, defense ministries, intelligence agencies, and defense contractors managing classified operations, mission systems, and strategic assets.
15	Whitelist	Networking & Infrastructure/ Telecommunications	---	Website Category	Include networking systems, telecommunications infrastructure, and related technologies that enable data transmission and connectivity between devices, users, and systems.
16	Whitelist	News & Media	---	Website Category	Include organizations, platforms, and digital systems that create, distribute, or host journalistic and editorial content, newspapers, online news portals, TV/ radio broadcasters, magazines, blogs, and digital publishers.
17	Whitelist	Non-Profit/ NGO/ Advocacy	---	Website Category	Including non-governmental, charitable, humanitarian, or advocacy organizations that operate to promote social, environmental, human rights, or community-based causes.
18	Whitelist	Public Broadcasting/ National News Agency	---	Website Category	Include state-owned or publicly funded media organizations responsible for producing, managing, and disseminating news, educational, and cultural content to the general public, television, radio, online, and press agencies that serve as official or national sources of information.
19	Whitelist	Public Education/ Citizen Portal	---	Website Category	Include digital platforms, websites, and information systems operated by governments or public institutions to provide citizens with educational resources, public awareness campaigns, and access to civic information or services.
20	Whitelist	Public Services/ Civic Information	---	Website Category	Includes public-sector websites, e-government portals, open data systems, and digital platforms providing civic resources such as licensing, taxation, healthcare, transportation, and voting services.
21	Whitelist	Real Estate	---	Website Category	Include organizations, platforms, and digital systems involved in property development, sales, leasing, and management, real estate developers, brokerage agencies, property listing websites, and asset management platforms.
22	Whitelist	Recruitment/ Job Search/ Career	---	Website Category	Include digital platforms, corporate systems, and services used for talent acquisition, job posting, and career development, public job search websites, applicant tracking systems, corporate HR portals, and professional networking platforms.
23	Whitelist	Research	---	Website Category	Covers research activities, data, and systems involved in scientific, technical, or industrial innovation, exchange of research data, methodologies, experiment results, prototypes, and publications.
24	Whitelist	Sports/ Recreation	---	Website Category	Include organizations, digital platforms, and systems related to sports management, events, fitness, and recreational services, sports federations, clubs, event organizers, ticketing platforms, and fitness applications.

No	List	Category	Domain	Type	Note
25	Whitelist	Technical Documentation/ Support & Services	---	Website Category	Refers to technical manuals, system documentation, troubleshooting guides, operational procedures, and IT support materials used by engineers, administrators, or service teams. System architecture diagrams, API documentation, configuration manuals,...
26	Whitelist	Technology/ Computers	---	Website Category	Covers content, systems, and platforms related to Information Technology (IT), computing, infrastructure, software development, networking, cybersecurity, data management, and system administration. This category is primarily accessed by engineers, developers, and IT administrators.
27	Whitelist	Training/ Certification/ E-learning Pla	---	Website Category	Refers to digital learning environments and certification systems that provide online training, skill development, and course management. These platforms host educational content, track learner progress, manage certifications, and store user data such as profiles, assessments, and completion records. They may be internal (corporate LMS) or external (third-party training vendors).
28	Whitelist	Travel/ Tourism	---	Website Category	Include organizations, digital platforms, and systems in the travel and tourism industry that manage information related to travel booking, hospitality, transportation, attractions, and customer experiences.

Blacklist

No	List	Category	Domain	Type	Note
1	Blacklist	Adult/ Pornography	---	Website Category	These sites contain pornographic, sexually explicit, or adult-oriented material, often including nudity, sexual acts, or escort-related content. The sites are blacklisted for violating corporate ethics, legal compliance, and acceptable use policies. They present high legal, reputational, and cybersecurity risks, including exposure to malware, phishing, and data leakage. Accessing such content can compromise the organization's network integrity and lead to serious compliance or disciplinary consequences.
2	Blacklist	Anonymous Email/ SMS	---	Website Category	Services or apps that let users send email, SMS or messages anonymously (throwaway/temporary mail, burner SMS, anonymous chat/messaging) and often provide spoofing, disposable return paths. Blocked because they enabling fraud, phishing, harassment, data exfiltration, and coordination of malicious activity. These tools bypass corporate logging and incident response, pose legal and compliance risks, and have no legitimate, verifiable business purpose on corporate networks.
3	Blacklist	Browser Extension Proxy/ WebRTC Leak Tools	---	Website Category	Browser extensions or utilities that proxy traffic, enable WebRTC-based peer connections, or deliberately leak/override IP routing—used to mask real IPs or bypass network policies. Blocked because they bypass network controls and leak internal IPs, undermining firewall, DLP, and logging. They enable anonymous or unaudited exfiltration, evasion of geolocation/restrictions, and can expose endpoints to remote access abuses. These tools have no sanctioned corporate use and pose significant security, compliance.
4	Blacklist	Child Exploitation	---	Website Category	These sites contain or promote child sexual abuse material (CSAM), child grooming, or exploitation content in any form. They are strictly blacklisted for containing illegal, abusive, and unethical material that constitutes a serious criminal offense under international law. Such content poses severe legal, ethical, and human rights violations, and has no legitimate or work-related purpose. Accessing or distributing it is punishable by law and a critical breach of organizational and moral standards.
5	Blacklist	Command & Control (C2)	---	Website Category	These sites or servers are used by attackers to remotely control infected devices or botnets, send malicious commands, exfiltrate data, or deploy additional payloads. They are often part of ransomware, spyware, or advanced persistent threat (APT) infrastructures. They are blacklisted for being directly associated with active cyberattacks and malware control operations. Connecting to C2 servers can lead to full system compromise, data theft, and lateral spread of infections across the corporate network. High risk, serve no business purpose, and must be immediately blocked to protect organizational security and continuity.
6	Blacklist	Cryptomining/ Coinminer	---	Website Category	These sites or scripts enable unauthorized cryptocurrency mining (cryptojacking) on user devices or corporate servers, consuming CPU, GPU, and network resources without consent. They are often embedded in compromised websites, browser extensions, or malicious ads. They are blacklisted for exploiting system resources and degrading network performance, leading to productivity loss, hardware damage, and increased energy costs. Cryptomining activity can also hide malware or data exfiltration operations. Such behavior is unauthorized, and serves no business purpose, posing serious security, operational, and compliance risks to the organization.
7	Blacklist	Drugs/ Illegal Substances	---	Website Category	These sites promote, sell, or provide information about illegal drugs, controlled substances, or drug paraphernalia, including the production, trafficking, or misuse of narcotics and psychoactive materials. The sites are blacklisted for violating legal and regulatory restrictions by promoting illegal drug use or distribution. They pose serious compliance, legal, and reputational risks, and are often associated with cybercrime, scams, and malware distribution. Accessing such content can expose the organization to criminal liability and network compromise.
8	Blacklist	Dynamic DNS/ Anonymizer Hosting	---	Website Category	Services that provide dynamic DNS, VPN/anonymizer proxies, TOR relays, or bulletproof hosting—often used to hide true server locations or anonymize traffic for malicious actors. They are blacklisted because they enable anonymity and evasion, making it easier for attackers to host malware, phishing, C2 servers, or illegal content while avoiding takedown and attribution. These services bypass security controls and logging, pose high operational and legal risk, and have no sanctioned business purpose on corporate networks. Block or restrict access; allow only vetted, business-approved VPN/proxy services with logging and conditional access.
9	Blacklist	Exploit Kits/ Drive-by Download	---	Website Category	Sites or toolkits that automatically deliver exploits to vulnerable browsers, plugins, or software—triggering silent malware installs when a user visits a page. They are blacklisted because they enable automated compromise, leading to malware, ransomware, or C2 callbacks. These sites pose immediate operational and data-security risks and have no legitimate business purpose.

No	List	Category	Domain	Type	Note
10	Blacklist	File Hosting (Warez/ Crack)	---	Website Category	These sites host or distribute pirated software, cracks, license keys, or hacked applications, often disguised as legitimate downloads. They are blacklisted for promoting illegal software distribution and copyright violations. Such sites are major infection sources for malware, ransomware, and trojans, posing severe cybersecurity and legal risks. Accessing them serves no legitimate business purpose and can compromise corporate systems, credentials, and data integrity.
11	Blacklist	File Sharing/ Upload Sites/ Torrent Index	---	Website Category	These platforms allow users to publicly upload, store, and share files (e.g., documents, videos, executables) without centralized security control — examples include MediaFire, Mega, Zippyshare, or WeTransfer (public use). They are blacklisted for posing risks of data leakage, malware distribution, and copyright infringement. Public file-sharing services can bypass company DLP controls, enabling unauthorized transfer of confidential or copyrighted data. Such platforms lack encryption and access governance and are not approved for business-related file exchange within the organization.
12	Blacklist	Gambling/ Betting	---	Website Category	These sites provide access to online gambling, sports betting, lotteries, or casino-style gaming, including real-money wagering and virtual betting platforms. The sites are blacklisted for promoting gambling and betting activities, which are restricted or illegal under corporate and regulatory policies. They do not serve any business purpose and present financial, legal, and reputational risks. Such platforms are also common vectors for fraud, phishing, and malware, potentially compromising user credentials and corporate network security.
13	Blacklist	Hate/ Extremism/ Terrorism	---	Website Category	These sites promote or distribute hate speech, extremist ideologies, terrorist propaganda, or materials inciting violence or discrimination against individuals or groups based on race, religion, gender, or nationality. The sites are blacklisted for containing illegal and harmful content that promotes hatred, radicalization, or terrorist activities, which violates laws, human rights, and organizational ethics. They pose serious national security, reputational, and compliance risks, and may also be used as channels for recruitment, funding, or cyberattacks, threatening both users and the organization's network integrity.
14	Blacklist	Illegal Activities	---	Website Category	These sites promote, facilitate, or provide information related to criminal acts, such as hacking, fraud, identity theft, counterfeiting, human trafficking, or other unlawful behavior. They are blacklisted for encouraging or enabling illegal conduct, which violates laws, corporate policies, and ethical standards. Such sites pose major cybersecurity, legal, and reputational risks, including exposure to malware, scams, and data theft, and serve no legitimate business purpose within the organization.
15	Blacklist	Illegal Downloads/ Piracy/ WareZ	---	Website Category	These sites distribute or enable unauthorized downloading or sharing of copyrighted software, movies, music, or digital content. They are blacklisted for violating copyright laws and intellectual property rights. Such activity is illegal, unethical, and unrelated to legitimate business purposes. These sites also pose high risks of malware, data theft, and legal liability, making them unsuitable for any work-related use.
16	Blacklist	Malware/ Malicious Sites	---	Website Category	These sites host or distribute malware, ransomware, trojans, spyware, or phishing payloads designed to compromise user devices or corporate networks. They may also mimic legitimate websites to steal credentials, deliver drive-by downloads, or install backdoors. They are blacklisted for posing severe cybersecurity threats, including data theft, system compromise, and ransomware infection. Accessing such sites can lead to unauthorized access, service disruption, and loss of confidential data. These domains are strictly prohibited and serve no business purpose, as they endanger network integrity, business continuity, and regulatory compliance.
17	Blacklist	Peer-to-Peer (P2P)	---	Website Category	These sites or applications enable direct file sharing between users (e.g., BitTorrent, eMule, LimeWire) for music, videos, software, or large data transfers, often outside controlled or authorized channels. They are blacklisted due to high risks of malware, data leakage, and copyright violations. P2P traffic can bypass corporate security controls, consume excessive bandwidth, and expose internal systems to unauthorized access. Such platforms do not serve any legitimate business purpose and can compromise network integrity and compliance.
18	Blacklist	Phishing/ Fraud/ Scam	---	Website Category	These sites are designed to deceive users into revealing personal, financial, or corporate information through fake login pages, impersonation of trusted brands, or fraudulent offers. They often aim to steal credentials, distribute malware, or conduct financial scams. They are blacklisted for posing critical security and financial risks, including identity theft, credential compromise, and data breaches. Such sites violate cybersecurity and compliance standards and can lead to loss of corporate data, financial fraud, and reputational damage. Accessing them has no legitimate business purpose and is strictly prohibited within the organization.
19	Blacklist	Spam/ Bot/ Click Fraud	---	Website Category	These sites or networks are used for sending spam, hosting botnets, or generating fraudulent ad clicks and traffic, often to steal revenue or spread malware. They are blacklisted for engaging in deceptive and malicious activity, including automated spam, fake traffic generation, and phishing distribution. Such domains pose high cybersecurity and reputational risks, consume bandwidth, and serve no legitimate business purpose within a secure network.

No	List	Category	Domain	Type	Note
20	Blacklist	Spyware/ Keylogger	---	Website Category	These sites distribute or control spyware, keyloggers, and tracking tools designed to secretly record user activity, keystrokes, credentials, or system information. They are blacklisted for posing severe privacy and data security risks, as they can steal sensitive corporate information, login credentials, and confidential communications. Such threats enable unauthorized surveillance, insider compromise, and data exfiltration, making them highly dangerous and unrelated to any legitimate business use. Blocking access prevents espionage, credential theft, and regulatory violations.
21	Blacklist	TOR Network/ Onion Routing	---	Website Category	A decentralized overlay network that routes traffic through multiple volunteer relays (*.onion addresses) to provide strong anonymity for users and hidden services. Blocked because it bypasses corporate security controls and logging, enabling anonymous access to malicious services (C2, malware, illegal marketplaces) and data exfiltration. TOR presents high operational, legal, and forensic risk for corporate networks and is typically not permitted for sanctioned business activity.
22	Blacklist	Violence/ Gore/ Weapons	---	Website Category	These sites contain graphic violence, gore, weapon sales, or content promoting harm, terrorism, or criminal activity. They may include violent videos, real-world injury footage, or instructions for weapon use or manufacturing. The sites are blacklisted for promoting or displaying violent, extremist, or illegal material, which violates laws, ethical standards, and corporate acceptable use policies. They also pose severe cybersecurity and reputational risks, as such domains are frequently linked to malware, radicalization content, and illegal transactions, potentially compromising both user safety and organizational integrity.
