LOC	:	N/A
DURATION	:	180 Minutes

Unit 5. Android Room Database

Assignment 1: Room Assignment

A Small Hotel wants to create an Access Database to keep track of rooms, clients, room occupation and client room expenses.

- For each room we want to know: room number, room type (suite, single, double...), room facilities (TV, bar, vault...).
- One or more photos for each room type (the photo with ID=1 will be the default one) ...
- For each Client we want to know: client id, name, gender, country, one phone contact, rooms and occupation dates, room expenses (additional expenses, excluding room price).

Room price is the same for each room type.

Room facilities are the same for all the rooms of the same type.

1. Create a FORM to input **room occupation including client room expenses**.
2. Input some significant data (5 - 10 rooms, 8 - 10 clients).
3. Show all data using recycler view.
4. Sum of room expenses(including room price) for each client in year 2023.
5. Total hotel revenue by year.
