Assignment 6: Exceptions

Working Environments

- JDK 1.8
- Eclipse

Assignment Descriptions

Exercise 1: Create an array of 10 random integers

Write a Program that will let the user input an index of the array and then output the value of that array to the console.

Functional Requirements:

Needs to catch exceptions that may occur in the program.

Exercise 2: Write a program to input 2 real numbers. Catch the exception so that when input is not a number.

Write a function that divides 2 real numbers, which catches an exception if the divisor is 0, then the division is invalid, and the program terminates.

Exercise 3: Initialize an array with 10 elements, index from 0 to 9.

The request needs to handle the exception when we are trying to access the element with index 11 and print the message to the user.

Index is received from the keyboard and displays the value according to the index entered by the user
